SEIRS MultiSpecies MetaPopulation keywords / built-ins

```
KModel SEIRS
    attribute: #(status in (S E I R));
    parameters: #(beta lambda gamma mu sigma nu);
    lambda: #(beta*I/N);
    equations: #(
        S:t=mu*N - lambda*S - mu*S + nu*R.
        E:t=lambda*S - sigma*E - mu*E.
        I:t=sigma*E - gamma*I - mu*I.
        R:t=gamma*I - mu*R - nu*R.).

KModel MultiSpecies
    attribute: #(species in (humans birds)); inherited.

KModel MetaPopulation
    attribute: #(zone in (range 1 15)); inherited;
    parameters: #(rho);
    topology: #(ring oneWay);
    transitionRate: #(rho).
